Websters Third New International Dictionary Of The English Language, Unabridged

Philip Babcock Gove

For those who have not read or paged through the 1957 edition, the 1957 edition contains many useful detailed charts of colour pigment percentages, the constellations, Webster's Third New International Dictionary of The English Language Unabridged, under the editorial of Philip Babcock Gove, Ph.D. from 1986, is a remarkable edition. Being an enthusiast of unabridged dictionaries, I can express my overall opinion in saying that the 1986 edition is about as close to the 1957 edition as it can get. For those who have not read or paged through the 1957 edition, the 1957 edition contains many useful detailed charts of colour pigment percentages. Among the dictionaries are Websterâ€™s Third New International Dictionary of the English Language (1961), which contains more than 476,000 entries and provides the most extensive record of American English now available, and the 11th edition of Merriam-Websterâ€™s Collegiate Dictionary (2003).
