Microeconomic reform is only part of the explanation of reduced transaction costs; much of the reduction would have taken place regardless. However, there is a distinct contribution. Improved productive efficiency of service industries, such as transport and telecommunications, has led to reductions in prices and facilitated more specialisation and trade. Thus comparisons are made between airlines, rail systems and electricity industries in different states or countries. Where the performance of one is not as good as those of others, the difference is attributed to the different institutional environment. Reforms which make the institutional environment of the poorly performing industry closer to those of the better performing industries are suggested as likely to improve performance.
