Contents

1 Introduction 1
   1.1 Multivariate Statistics: Why? 1
      1.1.1 The Domain of Multivariate Statistics: Numbers of IVs and DVs 2
      1.1.2 Experimental and Nonexperimental Research 2
      1.1.3 Computers and Multivariate Statistics 3
      1.1.4 Garbage In, Roses Out? 4
   1.2 Some Useful Definitions 5
      1.2.1 Continuous, Discrete, and Dichotomous Data 5
      1.2.2 Samples and Populations 6
      1.2.3 Descriptive and Inferential Statistics 7
      1.2.4 Orthogonality: Standard and Sequential Analyses 7
   1.3 Linear Combinations of Variables 9
   1.4 Number and Nature of Variables to Include 10
   1.5 Statistical Power 10
   1.6 Data Appropriate for Multivariate Statistics 11
      1.6.1 The Data Matrix 11
      1.6.2 The Correlation Matrix 12
      1.6.3 The Variance–Covariance Matrix 12
      1.6.4 The Sum-of-Squares and Cross-Products Matrix 13
      1.6.5 Residuals 14
  1.7 Organization of the Book 14

2 A Guide to Statistical Techniques: Using the Book 15
   2.1 Research Questions and Associated Techniques 15
      2.1.1 Degree of Relationship Among Variables 15
         2.1.1.1 Bivariate r 16
         2.1.1.2 Multiple R 16
         2.1.1.3 Sequential R 16
         2.1.1.4 Canonical R 16
         2.1.1.5 Multway Frequency Analysis 17
         2.1.1.6 Multilevel Modeling 17
      2.1.2 Significance of Group Differences 17
         2.1.2.1 One-Way ANOVA and t Test 17
         2.1.2.2 One-Way ANCOVA 17
         2.1.2.3 Factorial ANOVA 18
         2.1.2.4 Factorial ANCOVA 18
         2.1.2.5 Hotelling’s T² 18
         2.1.2.6 One-Way MANOVA 18
         2.1.2.7 One-Way MANCOVA 19
         2.1.2.8 Factorial MANOVA 19
         2.1.2.9 Factorial MANCOVA 19
         2.1.2.10 Profile Analysis of Repeated Measures 19
   2.1.3 Prediction of Group Membership 20
      2.1.3.1 One-Way Discriminant Analysis 20
      2.1.3.2 Sequential One-Way Discriminant Analysis 20
      2.1.3.3 Multiway Frequency Analysis (Logit) 21
      2.1.3.4 Logistic Regression 21
      2.1.3.5 Sequential Logistic Regression 21
      2.1.3.6 Factorial Discriminant Analysis 21
      2.1.3.7 Sequential Factorial Discriminant Analysis 22
   2.1.4 Structure 22
      2.1.4.1 Principal Components 22
      2.1.4.2 Factor Analysis 22
      2.1.4.3 Structural Equation Modeling 22
   2.1.5 Time Course of Events 22
      2.1.5.1 Survival/Failure Analysis 23
      2.1.5.2 Time-Series Analysis 23
   2.2 Some Further Comparisons 23
   2.3 A Decision Tree 24
   2.4 Technique Chapters 27
   2.5 Preliminary Check of the Data 28

3 Review of Univariate and Bivariate Statistics 29
   3.1 Hypothesis Testing 29
      3.1.1 One-Sample z Test as Prototype 30
      3.1.2 Power 32
      3.1.3 Extensions of the Model 32
      3.1.4 Controversy Surrounding Significance Testing 33
   3.2 Analysis of Variance 33
      3.2.1 One-Way Between-Subjects ANOVA 34
      3.2.2 Factorial Between-Subjects ANOVA 36
      3.2.3 Within-Subjects ANOVA 38
      3.2.4 Mixed Between-Within-Subjects ANOVA 40
      3.2.5 Design Complexity 41
         3.2.5.1 Nesting 41
         3.2.5.2 Latin-Square Designs 42
         3.2.5.3 Unequal n and Nonorthogonality 42
         3.2.5.4 Fixed and Random Effects 43
      3.2.6 Specific Comparisons 43
         3.2.6.1 Weighting Coefficients for Comparisons 43
         3.2.6.2 Orthogonality of Weighting Coefficients 44
         3.2.6.3 Obtained F for Comparisons 44
         3.2.6.4 Critical F for Planned Comparisons 45
         3.2.6.5 Critical F for Post Hoc Comparisons 45
   3.3 Parameter Estimation 46
   3.4 Effect Size 47
5.7 Complete Examples of Regression Analysis 138

5.7.1 Evaluation of Assumptions 139

5.7.1.1 Ratio of Cases to IVs 139

5.7.1.2 Normality, Linearity, Homoscedasticity, and Independence of Residuals 139

5.7.1.3 Outliers 142

5.7.1.4 Multicollinearity and Singularity 144

5.7.2 Standard Multiple Regression 144

5.7.3 Sequential Regression 150

5.7.4 Example of Standard Multiple Regression with Missing Values Multiply Imputed 154

5.8 Comparison of Programs 162

5.8.1 IBM SPSS Package 163

5.8.2 SAS System 165

5.8.3 SYSTAT System 166

6 Analysis of Covariance 167

6.1 General Purpose and Description 167

6.2 Kinds of Research Questions 170

6.2.1 Main Effects of IVs 170

6.2.2 Interactions Among IVs 170

6.2.3 Specific Comparisons and Trend Analysis 170

6.2.4 Effects of Covariates 170

6.2.5 Effect Size 171

6.2.6 Parameter Estimates 171

6.3 Limitations to Analysis of Covariance 171

6.3.1 Theoretical Issues 171

6.3.2 Practical Issues 172

6.3.2.1 Unequal Sample Sizes, Missing Data, and Ratio of Cases to IVs 172

6.3.2.2 Absence of Outliers 172

6.3.2.3 Absence of Multicollinearity and Singularity 172

6.3.2.4 Normality of Sampling Distributions 173

6.3.2.5 Homogeneity of Variance 173

6.3.2.6 Linearity 173

6.3.2.7 Homogeneity of Regression 173

6.3.2.8 Reliability of Covariates 174

6.4 Fundamental Equations for Analysis of Covariance 174

6.4.1 Sums of Squares and Cross-Products 175

6.4.2 Significance Test and Effect Size 177

6.4.3 Computer Analyses of Small-Sample Example 178

6.5 Some Important Issues 179

6.5.1 Choosing Covariates 179

6.5.2 Evaluation of Covariates 180

6.5.3 Test for Homogeneity of Regression 180

6.5.4 Design Complexity 181

6.5.4.1 Within-Subjects and Mixed Within-Between Designs 181

6.5.4.2 Unequal Sample Sizes 182

6.5.4.3 Specific Comparisons and Trend Analysis 185

6.5.4.4 Effect Size 187

6.5.5 Alternatives to ANCOVA 187

6.6 Complete Example of Analysis of Covariance 189

6.6.1 Evaluation of Assumptions 189

6.6.1.1 Unequal n and Missing Data 189

6.6.1.2 Normality 191

6.6.1.3 Linearity 191

6.6.1.4 Outliers 191

6.6.1.5 Multicollinearity and Singularity 192

6.6.1.6 Homogeneity of Variance 192

6.6.1.7 Homogeneity of Regression 193

6.6.1.8 Reliability of Covariates 193

6.6.2 Analysis of Covariance 193

6.6.2.1 Main Analysis 193

6.6.2.2 Evaluation of Covariates 196

6.6.2.3 Homogeneity of Regression Run 197

6.7 Comparison of Programs 200

6.7.1 IBM SPSS Package 200

6.7.2 SAS System 200

6.7.3 SYSTAT System 200

7 Multivariate Analysis of Variance and Covariance 203

7.1 General Purpose and Description 203

7.2 Kinds of Research Questions 206

7.2.1 Main Effects of IVs 206

7.2.2 Interactions Among IVs 207

7.2.3 Importance of DVs 207

7.2.4 Parameter Estimates 207

7.2.5 Specific Comparisons and Trend Analysis 207

7.2.6 Effect Size 208

7.2.7 Effects of Covariates 208

7.2.8 Repeated-Measures Analysis of Variance 208

7.3 Limitations to Multivariate Analysis of Variance and Covariance 208

7.3.1 Theoretical Issues 208

7.3.2 Practical Issues 209

7.3.2.1 Unequal Sample Sizes, Missing Data, and Power 209

7.3.2.2 Multivariate Normality 210

7.3.2.3 Absence of Outliers 210

7.3.2.4 Homogeneity of Variance–Covariance Matrices 210

7.3.2.5 Linearity 211

7.3.2.6 Homogeneity of Regression 211

7.3.2.7 Reliability of Covariates 211

7.3.2.8 Absence of Multicollinearity and Singularity 211

7.4 Fundamental Equations for Multivariate Analysis of Variance and Covariance 212

7.4.1 Multivariate Analysis of Variance 212
7.4.2 Computer Analyses of Small-Sample Example 218
7.4.3 Multivariate Analysis of Covariance 221

7.5 Some Important Issues 223
7.5.1 MANOVA Versus ANOVAs 223
7.5.2 Criteria for Statistical Inference 223

7.5.3 Assessing DVs
7.5.3.1 Univariate $F$ 224
7.5.3.2 Roy–Bargmann Stepdown Analysis 226
7.5.3.3 Using Discriminant Analysis 226
7.5.3.4 Choosing Among Strategies for Assessing DVs 227

7.5.4 Specific Comparisons and Trend Analysis 227
7.5.5 Design Complexity
7.5.5.1 Within-Subjects and Between-Within Designs 228
7.5.5.2 Unequal Sample Sizes 228

7.6 Complete Examples of Multivariate Analysis of Variance and Covariance 230
7.6.1 Evaluation of Assumptions
7.6.1.1 Unequal Sample Sizes and Missing Data 230
7.6.1.2 Multivariate Normality 231
7.6.1.3 Linearity 231
7.6.1.4 Outliers 232
7.6.1.5 Homogeneity of Variance–Covariance Matrices 233
7.6.1.6 Homogeneity of Regression 233
7.6.1.7 Reliability of Covariates 235
7.6.1.8 Multicollinearity and Singularity 235
7.6.2 Multivariate Analysis of Variance 235
7.6.3 Multivariate Analysis of Covariance
7.6.3.1 Assessing Covariates 244
7.6.3.2 Assessing DVs 245

7.7 Comparison of Programs
7.7.1 IBM SPSS Package 252
7.7.2 SAS System 254
7.7.3 SYSTAT System 255

8 Profile Analysis: The Multivariate Approach to Repeated Measures 256
8.1 General Purpose and Description 256
8.2 Kinds of Research Questions
8.2.1 Parallelism of Profiles 258
8.2.2 Overall Difference Among Groups 258
8.2.3 Flatness of Profiles 258
8.2.4 Contrasts Following Profile Analysis 258
8.2.5 Parameter Estimates 258
8.2.6 Effect Size 259

8.3 Limitations to Profile Analysis
8.3.1 Theoretical Issues 259
8.3.2 Practical Issues
8.3.2.1 Sample Size, Missing Data, and Power 259

8.3.2.2 Multivariate Normality 260
8.3.2.3 Absence of Outliers 260
8.3.2.4 Homogeneity of Variance–Covariance Matrices 260
8.3.2.5 Linearity 260
8.3.2.6 Absence of Multicollinearity and Singularity 260

8.4 Fundamental Equations for Profile Analysis 260
8.4.1 Differences in Levels 262
8.4.2 Parallelism 262
8.4.3 Flatness 265
8.4.4 Computer Analyses of Small-Sample Example 266

8.5 Some Important Issues 269
8.5.1 Univariate Versus Multivariate Approach to Repeated Measures 269
8.5.2 Contrasts in Profile Analysis
8.5.2.1 Parallelism and Flatness Significant, Levels Not Significant (Simple-Effects Analysis) 272
8.5.2.2 Parallelism and Levels Significant, Flatness Not Significant (Simple-Effects Analysis) 274
8.5.2.3 Parallelism, Levels, and Flatness Significant (Interaction Contrasts) 275
8.5.2.4 Only Parallelism Significant 276
8.5.3 Doubly Multivariate Designs 277
8.5.4 Classifying Profiles 279
8.5.5 Imputation of Missing Values 279

8.6 Complete Examples of Profile Analysis 280
8.6.1 Profile Analysis of Subscales of the WISC 280
8.6.1.1 Evaluation of Assumptions 280
8.6.1.2 Profile Analysis 283
8.6.2 Doubly Multivariate Analysis of Reaction Time 288
8.6.2.1 Evaluation of Assumptions 289
8.6.2.2 Doubly Multivariate Analysis of Slope and Intercept 290

8.7 Comparison of Programs
8.7.1 IBM SPSS Package 297
8.7.2 SAS System 298
8.7.3 SYSTAT System 298

9 Discriminant Analysis 299
9.1 General Purpose and Description 299
9.2 Kinds of Research Questions
9.2.1 Significance of Prediction 302
9.2.2 Number of Significant Discriminant Functions 302
9.2.3 Dimensions of Discrimination 302
9.2.4 Classification Functions 303
9.2.5 Adequacy of Classification 303
9.2.6 Effect Size 303
9.2.7 Importance of Predictor Variables 303
9.2.8 Significance of Prediction with Covariates 304
9.2.9 Estimation of Group Means 304
10 Logistic Regression 346

10.1 General Purpose and Description 346

10.2 Kinds of Research Questions 348
   10.2.1 Prediction of Group Membership or Outcome 348
   10.2.2 Importance of Predictors 348
   10.2.3 Interactions Among Predictors 349
   10.2.4 Parameter Estimates 349
   10.2.5 Classification of Cases 349
   10.2.6 Significance of Prediction with Covariates 349
   10.2.7 Effect Size 349

10.3 Limitations to Logistic Regression Analysis 350
   10.3.1 Theoretical Issues 350
   10.3.2 Practical Issues 350
      10.3.2.1 Ratio of Cases to Variables 350
      10.3.2.2 Adequacy of Expected Frequencies and Power 351
      10.3.2.3 Linearity in the Logit 351
      10.3.2.4 Absence of Multicollinearity 351
      10.3.2.5 Absence of Outliers in the Solution 351
      10.3.2.6 Independence of Errors 352

10.4 Fundamental Equations for Logistic Regression 352
   10.4.1 Testing and Interpreting Coefficients 353
   10.4.2 Goodness of Fit 354
   10.4.3 Comparing Models 355
   10.4.4 Interpretation and Analysis of Residuals 355
   10.4.5 Computer Analyses of Small-Sample Example 356

10.5 Types of Logistic Regression 360
   10.5.1 Direct Logistic Regression 360
   10.5.2 Sequential Logistic Regression 360
   10.5.3 Statistical (Stepwise) Logistic Regression 362
   10.5.4 Probit and Other Analyses 362

10.6 Some Important Issues 363
   10.6.1 Statistical Inference 363
      10.6.1.1 Assessing Goodness of Fit of Models 363
      10.6.1.2 Tests of Individual Predictors 365
   10.6.2 Effect Sizes 365
      10.6.2.1 Effect Size for a Model 365
      10.6.2.2 Effect Sizes for Predictors 366
   10.6.3 Interpretation of Coefficients Using Odds 367
   10.6.4 Coding Outcome and Predictor Categories 368
   10.6.5 Number and Type of Outcome Categories 369
   10.6.6 Classification of Cases 372
   10.6.7 Hierarchical and Nonhierarchical Analysis 372
11 Survival/Failure Analysis 401
11.1 General Purpose and Description 401
11.2 Kinds of Research Questions 403
11.2.1 Proportions Surviving at Various Times 403
11.2.2 Group Differences in Survival 403
11.2.3 Survival Time with Covariates 403
11.2.3.1 Treatment Effects 403
11.2.3.2 Importance of Covariates 403
11.2.3.3 Parameter Estimates 404
11.2.3.4 Contingencies Among Covariates 404
11.2.3.5 Effect Size and Power 404
11.3 Limitations to Survival Analysis 404
11.3.1 Theoretical Issues 404
11.3.2 Practical Issues 404
11.3.2.1 Sample Size and Missing Data 404
11.3.2.2 Normality of Sampling Distributions, Linearity, and Homoscedasticity 405
11.3.2.3 Absence of Outliers 405
11.3.2.4 Differences Between Withdrawn and Remaining Cases 405
11.3.2.5 Change in Survival Conditions over Time 405
11.3.2.6 Proportionality of Hazards 405
11.3.2.7 Absence of Multicollinearity 405
11.4 Fundamental Equations for Survival Analysis 405
11.4.1 Life Tables 406
11.4.2 Standard Error of Cumulative Proportion Surviving 408
11.4.3 Hazard and Density Functions 408
11.4.4 Plot of Life Tables 409
11.4.5 Test for Group Differences 410
11.4.6 Computer Analyses of Small-Sample Example 411
11.5 Types of Survival Analyses 415
11.5.1 Actuarial and Product-Limit Life Tables and Survivor Functions 415
11.5.2 Prediction of Group Survival Times from Covariates 417
11.5.2.1 Direct, Sequential, and Statistical Analysis 417
11.5.2.2 Cox Proportional-Hazards Model 417
11.5.2.3 Accelerated Failure-Time Models 419
11.5.2.4 Choosing a Method 423
11.6 Some Important Issues 423
11.6.1 Proportionality of Hazards 423
11.6.2 Censored Data 424
11.6.2.1 Right-Censored Data 425
11.6.2.2 Other Forms of Censoring 425
11.6.3 Effect Size and Power 425
11.6.4 Statistical Criteria 426
11.6.4.1 Test Statistics for Group Differences in Survival Functions 426
11.6.4.2 Test Statistics for Prediction from Covariates 427
11.6.5 Predicting Survival Rate 427
11.6.5.1 Regression Coefficients (Parameter Estimates) 427
11.6.5.2 Hazard Ratios 427
11.6.5.3 Expected Survival Rates 428
11.7 Complete Example of Survival Analysis 429
11.7.1 Evaluation of Assumptions 430
11.7.1.1 Accuracy of Input, Adequacy of Sample Size, Missing Data, and Distributions 430
11.7.1.2 Outliers 430
11.7.1.3 Differences Between Withdrawn and Remaining Cases 433
11.7.1.4 Change in Survival Experience over Time 433
11.7.1.5 Proportionality of Hazards 433
11.7.1.6 Multicollinearity 434
11.7.2 Cox Regression Survival Analysis 436
11.7.2.1 Effect of Drug Treatment 436
11.7.2.2 Evaluation of Other Covariates 436
11.8 Comparison of Programs 440
11.8.1 SAS System 444
11.8.2 IBM SPSS Package 445
11.8.3 SYSTAT System 445
12 Canonical Correlation 446
12.1 General Purpose and Description 446
12.2 Kinds of Research Questions 448
12.2.1 Number of Canonical Variate Pairs 448
12.2.2 Interpretation of Canonical Variates 448
12.2.3 Importance of Canonical Variates and Predictors 448
12.2.4 Canonical Variate Scores 449

12.3 Limitations 449
12.3.1 Theoretical Limitations 449
12.3.2 Practical Issues 450
12.3.2.1 Ratio of Cases to IVs 450
12.3.2.2 Normality, Linearity, and Homoscedasticity 450
12.3.2.3 Missing Data 451
12.3.2.4 Absence of Outliers 451
12.3.2.5 Absence of Multicollinearity and Singularity 451

12.4 Fundamental Equations for Canonical Correlation 451
12.4.1 Eigenvalues and Eigenvectors 452
12.4.2 Matrix Equations 454
12.4.3 Proportions of Variance Extracted 457
12.4.4 Computer Analyses of Small-Sample Example 458

12.5 Some Important Issues 462
12.5.1 Importance of Canonical Variates 462
12.5.2 Interpretation of Canonical Variates 463

12.6 Complete Example of Canonical Correlation 463
12.6.1 Evaluation of Assumptions 463
12.6.1.1 Missing Data 463
12.6.1.2 Normality, Linearity, and Homoscedasticity 463
12.6.1.3 Outliers 466
12.6.1.4 Multicollinearity and Singularity 467
12.6.2 Canonical Correlation 467

12.7 Comparison of Programs 473
12.7.1 SAS System 473
12.7.2 IBM SPSS Package 474
12.7.3 SYSTAT System 475

13 Principal Components and Factor Analysis 476
13.1 General Purpose and Description 476
13.2 Kinds of Research Questions 479
13.2.1 Number of Factors 479
13.2.2 Nature of Factors 479
13.2.3 Importance of Solutions and Factors 480
13.2.4 Testing Theory in FA 480
13.2.5 Estimating Scores on Factors 480

13.3 Limitations 480
13.3.1 Theoretical Issues 480
13.3.2 Practical Issues 481
13.3.2.1 Sample Size and Missing Data 481
13.3.2.2 Normality 482
13.3.2.3 Linearity 482
13.3.2.4 Absence of Outliers Among Cases 482

13.4 Fundamental Equations for Factor Analysis 483
13.4.1 Extraction 485
13.4.2 Orthogonal Rotation 487
13.4.3 Communalities, Variance, and Covariance 488
13.4.4 Factor Scores 489
13.4.5 Oblique Rotation 491
13.4.6 Computer Analyses of Small-Sample Example 493

13.5 Major Types of Factor Analyses 496
13.5.1 Factor Extraction Techniques 496
13.5.1.1 PCA Versus FA 496
13.5.1.2 Principal Components 498
13.5.1.3 Principal Factors 498
13.5.1.4 Image Factor Extraction 498
13.5.1.5 Maximum Likelihood Factor Extraction 499
13.5.1.6 Unweighted Least Squares Factoring 499
13.5.1.7 Generalized (Weighted) Least Squares Factoring 499
13.5.1.8 Alpha Factoring 499
13.5.2 Rotation 500
13.5.2.1 Orthogonal Rotation 500
13.5.2.2 Oblique Rotation 501
13.5.2.3 Geometric Interpretation 502
13.5.3 Some Practical Recommendations 503

13.6 Some Important Issues 504
13.6.1 Estimates of Communalities 504
13.6.2 Adequacy of Extraction and Number of Factors 504
13.6.3 Adequacy of Rotation and Simple Structure 507
13.6.4 Importance and Internal Consistency of Factors 508
13.6.5 Interpretation of Factors 509
13.6.6 Factor Scores 510
13.6.7 Comparisons Among Solutions and Groups 511

13.7 Complete Example of FA 511
13.7.1 Evaluation of Limitations 511
13.7.1.1 Sample Size and Missing Data 512
13.7.1.2 Normality 512
13.7.1.3 Linearity 512
13.7.1.4 Outliers 513

  17.5.2 Models with Interventions 738

18 An Overview of the General Linear Model

18.1 Linearity and the General Linear Model 775
18.2 Bivariate to Multivariate Statistics and Overview of Techniques 775
  18.2.1 Bivariate Form 775
  18.2.2 Simple Multivariate Form 777
  18.2.3 Full Multivariate Form 778
18.3 Alternative Research Strategies 782

Appendix A

A Skimpy Introduction to Matrix Algebra 783
  A.1 The Trace of a Matrix 784
  A.2 Addition or Subtraction of a Constant to a Matrix 784
  A.3 Multiplication or Division of a Matrix by a Constant 784
  A.4 Addition and Subtraction of Two Matrices 785
  A.5 Multiplication, Transposes, and Square Roots of Matrix 785
A.6 Matrix “Division” (Inverses and Determinants) 786
A.7 Eigenvalues and Eigenvectors: Procedures for Consolidating Variance from a Matrix 788

Appendix B
Research Designs for Complete Examples 791
B.1 Women’s Health and Drug Study 791
B.2 Sexual Attraction Study 793
B.3 Learning Disabilities Data Bank 794
B.4 Reaction Time to Identify Figures 794
B.5 Field Studies of Noise-Induced Sleep Disturbance 795
B.6 Clinical Trial for Primary Biliary Cirrhosis 795
B.7 Impact of Seat Belt Law 795
B.8 The Selene Online Educational Game 796

Appendix C
Statistical Tables 797
C.1 Normal Curve Areas 798
C.2 Critical Values of the $t$ Distribution for $\alpha = .05$ and .01, Two-Tailed Test 799
C.3 Critical Values of the $F$ Distribution 800
C.4 Critical Values of Chi Square ($\chi^2$) 804
C.5 Critical Values for Squares Multiple Correlation ($R^2$) in Forward Stepwise Selection: $\alpha = .05$ 805
C.6 Critical Values for $F_{\text{MAX}} (S_{\text{MAX}}^2/S_{\text{MIN}}^2)$ Distribution for $\alpha = .05$ and .01 807

Preface

Some good things seem to go on forever: friendship and updating this book. It is difficult to believe that the first edition manuscript was typewritten, with real cutting and pasting. The publisher required a paper manuscript with numbered pages—that was almost our downfall. We could write a book on multivariate statistics, but we couldn’t get the same number of pages (about 1200, double-spaced) twice in a row. SPSS was in release 9.0, and the other program we demonstrated was BMDP. There were a mere 11 chapters, of which 6 of them were describing techniques. Multilevel and structural equation modeling were not yet ready for prime time. Logistic regression and survival analysis were not yet popular.

Material new to this edition includes a redo of all SAS examples, with a pretty new output format and replacement of interactive analyses that are no longer available. We’ve also re-run the IBM SPSS examples to show the new output format. We’ve tried to update the references in all chapters, including only classic citations if they date prior to 2000. New work on relative importance has been incorporated in multiple regression, canonical correlation, and logistic regression analysis—complete with demonstrations. Multiple imputation procedures for dealing with missing data have been updated, and we’ve added a new time-series example, taking advantage of an IBM SPSS expert modeler that replaces previous tea-leaf reading aspects of the analysis.

Our goals in writing the book remain the same as in all previous editions—to present complex statistical procedures in a way that is maximally useful and accessible to researchers who are not necessarily statisticians. We strive to be short on theory but long on conceptual understanding. The statistical packages have become increasingly easy to use, making it all the more critical to make sure that they are applied with a good understanding of what they can and cannot do. But above all else—what does it all mean?

We have not changed the basic format underlying all of the technique chapters, now 14 of them. We start with an overview of the technique, followed by the types of research questions the techniques are designed to answer. We then provide the cautionary tale—what you need to worry about and how to deal with those worries. Then come the fundamental equations underlying the technique, which some readers truly enjoy working through (we know because they helpfully point out any errors and/or inconsistencies they find); but other readers discover they can skim (or skip) the section without any loss to their ability to conduct meaningful analysis of their research. The fundamental equations are in the context of a small, made-up, usually silly data set for which computer analyses are provided—usually IBM SPSS and SAS. Next, we delve into issues surrounding the technique (such as different types of the analysis, follow-up procedures to the main analysis, and effect size, if it is not amply covered elsewhere). Finally, we provide one or two full-bore analyses of an actual real-life data set together with a Results section appropriate for a journal. Data sets for these examples are available at www.pearsonhighered.com in IBM SPSS, SAS, and ASCII formats. We end each technique chapter with a comparison of features available in IBM SPSS, SAS, SYSTAT and sometimes other specialized programs. SYSTAT is a statistical package that we reluctantly had to drop a few editions ago for lack of space.

We apologize in advance for the heft of the book; it is not our intention to line the coffers of chiropractors, physical therapists, acupuncturists, and the like, but there’s really just so much to say. As to our friendship, it’s still going strong despite living in different cities. Art has taken the place of creating belly dance costumes for both of us, but we remain silly in outlook, although serious in our analysis of research.

The lineup of people to thank grows with each edition, far too extensive to list: students, reviewers, editors, and readers who send us corrections and point out areas of confusion. As always, we take full responsibility for remaining errors and lack of clarity.

Barbara G. Tabachnick
Linda S. Fidell
Multivariate Statistics Summary and Comparison of Techniques. P Explain the variation in a dichotomous dependent (grouping) variable using two or more continuous and/or categorical independent variables, and/or to develop a model for predicting the group membership of a sampling entity from the values of the independent variables, then use Alternatives: Multiple Logistic Regression DA CART (UCT). Using Multivariate Statistics. New York: Pearson. Other Readings We use statistics to make inferences about the true nature of the world, to answer research questions, to test theories. Hence, the goals of the course are to make sure that you walk away understanding the conceptual underpinnings of each technique, the SPSS procedures necessary to conduct these analyses, and the skills to be able to critically interpret your own results and the claims of the research you encounter throughout your careers. Using Multivariate Statistics Pearson New International Edition $93.91 (57) In Stock. Read more Read less. Give the gift of reading, now $19.99. This item: Using Multivariate Statistics (6th Edition) by Barbara G. Tabachnick Hardcover $244.60. Only 9 left in stock (more on the way). Ships from and sold by Amazon.com. FREE Shipping. Details. Discovering Statistics Using IBM SPSS Statistics, 4th Edition by Andy Field Paperback $28.97. Only 7 left in stock - order soon.
